

Zepto SQL Data Analysis Project

Project Overview

This project analyzes **Zepto product data using SQL** to explore product categories, pricing, discounts, stock availability, inventory, and estimated revenue.

The project also includes basic **data cleaning and transformation** before performing business-related analysis.

Tools Used

- SQL
- PostgreSQL
- Zepto Product Dataset

Dataset

The dataset contains information about Zepto products, including:

- SKU ID
- Product Category
- Product Name
- MRP
- Discount Percentage
- Available Quantity
- Discounted Selling Price
- Product Weight
- Stock Availability
- Quantity

The table is created as `zepto`.

Project Steps

1. Data Exploration

The project starts by exploring the dataset:

- Checking the total number of rows
- Viewing sample records
- Checking for NULL values
- Finding different product categories
- Checking in-stock and out-of-stock products
- Identifying products that appear multiple times

2. Data Cleaning

The data is cleaned by:

- Identifying products with zero prices
- Removing records where MRP is zero
- Converting MRP and selling prices from **paise to rupees**

3. Business Analysis

The project answers questions such as:

1. What are the **top 10 products based on discount percentage**?
2. Which **high-MRP products are out of stock**?
3. What is the **estimated revenue for each category**?
4. Which products have an **MRP above ₹500 with a low discount**?
5. Which **5 categories have the highest average discount**?
6. What is the **price per gram** for products weighing 100g or more?
7. How can products be grouped into **Low, Medium, and Bulk** weight categories?
8. What is the **total inventory weight for each category**?

These queries use SQL concepts such as `GROUP BY`, `ORDER BY`, `CASE`, aggregate functions, filtering, and calculations.

Project Structure

```
Zepto-SQL-Project/  
|  
├── portfolio_project.sql  
└── README.md
```

Key Skills Demonstrated

- SQL Data Exploration
- Data Cleaning
- Filtering and Sorting
- Aggregate Functions
- `GROUP BY`
- `CASE WHEN`
- Data Transformation
- Business Problem Solving
- Revenue & Inventory Analysis

How to Use

1. Open the SQL file in **PostgreSQL**.
2. Create the `zepto` table.
3. Load the Zepto dataset.
4. Run the data exploration and cleaning queries.

5. Execute the analysis queries to generate insights.
